

PSDigiLabs

SUMMARY

Enhance the existing PSDigiLabs Next.js website without unnecessarily redesigning or breaking the approved visual identity. Audit the existing codebase first and reuse the current design system, typography, spacing, colors, responsive breakpoints, components, navigation and footer wherever possible. Implement professional India/International pricing, interactive “Let's Connect” CTAs routing to /contact, a lead-capture contact page, and a customer-facing PSDigiLabs Assistant chatbot.

TECHNICAL SKILLS

Next.js
TypeScript
Responsive Web Design
Accessibility
Client-side Validation
Server-side Validation
SEO Metadata
Structured Data
Database Integration (PostgreSQL/Neon)
ORM Architecture Reuse
Lead Capture Forms
UI/UX Consistency
Navigation & Routing
Chatbot Conversation Flows
State Management
Spam Resistance
Semantic HTML
Mobile Optimization
Deployment Awareness
Code Quality & Linting

MAIN OBJECTIVES

1) Professional India / International pricing. 2) Make every relevant “Let's Connect” CTA interactive and route it to /contact. 3) Build a proper lead-capture Contact page. 4) Add a customer-facing PSDigiLabs Assistant chatbot.

PRICING REQUIREMENTS

Create /pricing route and homepage pricing preview. Use “Starting from” language and clarify final pricing depends on scope, functionality, integrations, content, complexity, and delivery. Add India/International market toggle (default India unless safe visitor detection), no live conversion API, and shared single source of truth for pricing data.

PRICING PACKAGES

Landing Page: India ₹8,000+, International \$199+, CTA /contact?service=landing-page. Business Website: India ₹18,000+, International \$449+, CTA /contact?service=business-website. CMS Pro Website: India ₹30,000+, International \$749+, marked Most Popular, CTA /contact?service=cms-pro. Advanced Business Platform: India ₹45,000+, International \$1,099+, CTA /contact?service=advanced-platform. E-commerce Website: India ₹40,000+,

International \$999+, CTA /contact?service=ecommerce. Custom Web Application: India ₹60,000+, International \$1,499+, CTA /contact?service=custom-web-application. Website Maintenance: India ₹3,000+/month, International \$99+/month, CTA /contact?service=maintenance.

CUSTOM REQUIREMENTS CTA

After pricing cards add: “Need Something More Custom?” with supporting copy for custom functionality/automation/integrations/dashboards/workflows. Buttons: “Request a Custom Quote” -> /contact?service=custom and “Let's Connect” -> /contact.

HOMEPAGE PRICING PREVIEW

Include compact section with: Website Development (₹8,000+ / \$199+), CMS & Business Platforms (₹30,000+ / \$749+), Custom Web Applications (₹60,000+ / \$1,499+). Buttons: View Pricing -> /pricing, Request a Quote -> /contact. Place appropriately in homepage flow without damaging approved layout.

CTA INTERACTIVITY AUDIT

Audit CTAs such as Let's Connect, Contact, Get Started, Start a Project, Work With Me, Request a Quote. For sales enquiry actions, route to /contact using proper Next.js navigation; no fake buttons or href="#"; preserve accessibility and keyboard navigation.

CONTACT PAGE & LEAD FORM

Create/enhance /contact with heading “Let's Build Something That Works” and balanced supporting copy. Required fields: Full Name, Email Address (format validation), Country, Service Required, Project Description. Optional fields: Phone/WhatsApp, Project/Business Name, Existing Website (URL validation only if entered). Preferred Timeline options included. Service preselection from ?service=... query parameter with validation.

BUDGET OPTIONS BY MARKET

India: Below ₹10,000; ₹10,000 – ₹25,000; ₹25,000 – ₹50,000; ₹50,000 – ₹1,00,000; ₹1,00,000+; Not sure yet. International: Below \$250; \$250 – \$500; \$500 – \$1,000; \$1,000 – \$2,500; \$2,500+; Not sure yet. No automatic currency conversion.

FORM UX & SUBMISSION

Implement Send Project Enquiry with client/server validation, loading/success/error states, duplicate-submission prevention, accessible labels, keyboard-friendly controls, focus states, mobile-friendly layout, no horizontal overflow, and architecture-appropriate spam resistance. Do not expose secrets in browser code.

LEAD STORAGE

Inspect existing architecture and reuse existing PostgreSQL/Neon if present. Add leads model/table (id, full_name, email, phone, country, service, budget, project_name, existing_website, project_description, preferred_timeline, source, status, created_at, updated_at), suggested defaults status='new', source='website'. Follow existing ORM/direct SQL approach; do not introduce new ORM unnecessarily.

SUCCESS EXPERIENCE

After successful contact submission, show acknowledgment: “Thanks — your project enquiry has been received. PSDigiLabs will review the details and get back to you.” Include Back to Home and optional Explore Services.

PSDIGILABS ASSISTANT CHATBOT

Add floating bottom-right assistant across public site with accessible label “Ask PSDigiLabs,” non-intrusive, desktop/mobile friendly. Identify transparently as “PSDigiLabs Assistant.” Purpose: services guidance, starting prices, package selection, quote prep, web/CMS/automation/QA understanding, and navigation to projects/pricing/contact.

CHATBOT FLOWS & UX

Initial message with quick actions (Build a Website, See Pricing, CMS/Admin Dashboard, Automation Services, Testing/QA, View Projects, Start a Project). Deterministic guided flows for website type, pricing by India/International, CMS explanation, automation options, QA/testing scope, and lead qualification (service, market, budget, timeline) with handoff to /contact?service=.... Include open/close, minimize, restart, back navigation where practical, quick replies, message styling, auto-scroll, accessible panel behavior, Escape-to-close desktop, focus management, mobile responsiveness, reduced-motion respect, no autoplay sounds or notification prompts.

NAVIGATION, SEO, AND STRUCTURED DATA

Add Pricing in navigation if appropriate without overload. Add natural metadata for /pricing and /contact with canonical handling per current architecture. Extend structured data only if already used; do not add fake reviews/ratings or misleading AggregateRating.

RESPONSIVE & DESIGN CONSTRAINTS

Validate around 320, 375, 430, 768, 1024, 1280+ widths. Ensure no horizontal scrollbar, usable toggle, responsive cards/form/chatbot, touch target sizes, and legible typography. Preserve PSDigiLabs visual identity: professional, modern, clean, credible, premium without flashy effects or clutter.

CODE QUALITY, VERIFICATION, AND REPORTING

Use TypeScript, avoid unnecessary any, reusable components, semantic HTML, avoid duplicated pricing definitions and hydration issues, keep server/client boundaries clean, validate incoming data, never trust query params directly. Run lint/build/type checks and git diff --check. Do not commit/push. Final report must include architecture, files created/modified, pricing confirmation, CTA routing, contact/lead system, chatbot behavior, database changes, SEO, responsive audit, verification outputs, and git status --short.
